Surabaya, East Java, Indonesia

PROFESSIONAL SUMMARY

Software Engineer with 9+ years of experience building web applications, backend systems, and transaction-intensive platforms, from full stack development to payment systems. Focused on making complex systems predictable and reliable, with strong attention to clean architecture, observability, and data integrity. Works closely with product and cross-functional teams to turn business requirements into clear APIs and maintainable solutions.

TECHNICAL SKILLS

Languages & Frameworks: Go, Node.js, PHP, Laravel, JavaScript, Vue.js

Databases & Messaging: PostgreSQL, MySQL, MongoDB, Redis, Apache Kafka, RabbitMQ, Firebase, ElasticSearch, Google Pub/Sub

Cloud & Observability: Google Cloud Platform (GCP), Grafana, Linux, Docker, Kubernetes, Prometheus, VictoriaMetrics, NewRelic, SonarQube

Architecture & APIs: REST APIs, Microservices, Payment/Payout Integration, Retry & DLQ Processing, Git, SDLC, Event-Driven

PROFESSIONAL EXPERIENCE

Software Engineer | PT Amartha Mikro Fintek **Sep 2021 – Oct 2026**

Surabaya, Indonesia • On-site

Payment Platform Team (Sep 2025 – Oct 2026)

- Refactored the Transaction V2 architecture by integrating payment and payout adapters into a unified transaction flow, enabling standardized disbursement and bank transfer processing across multiple payment channels on a platform handling 100K+ transactions daily with a 90%+ success rate.
- Designed and implemented system observability through metrics, monitoring, and alerting across consumer services and background jobs, giving the team real-time visibility into system health, transaction processing, and potential failures at 100K+ daily transactions.
- Integrated BCA Virtual Account Host-to-Host APIs to enable Virtual Account top-up transactions, including transaction processing, status handling, and integration with existing payment flows.
- Improved transaction reliability and fault tolerance by enhancing retry mechanisms and Dead Letter Queue (DLQ) processing to handle transient failures and ensure failed transactions could be recovered and reprocessed.
- Enhanced the Global Transaction History and Payment Widget, while migrating legacy transaction flows to a single API, simplifying transaction integration and improving consistency across products and services.

Technology Stack: Golang, PostgreSQL, ElasticSearch, Kafka, Redis, Docker, REST API

New Retail / Agent Network Team (Sep 2021 – Sep 2025)

- Contributed to New Retail / Agent Network solutions within the Payments business unit, building scalable payment and financial transaction services for a network of 500K+ active agents.
- Developed and enhanced agent onboarding and PPOB services covering loan repayment, remittance, withdrawal, and pocket top-up, supporting end-to-end agent transaction workflows at 20K+ transactions per day.
- Designed and implemented payment service integrations with internal systems and third-party PPOB providers, including Alterra, GoTo, and Sakalaguna, enabling reliable transaction processing across multiple payment channels.
- Designed and developed a Cashback & Incentive Management feature to manage agent reward programs, including incentive configuration, cashback calculation, eligibility rules, and transaction-based incentive tracking.
- Designed and implemented a Digital Ledger to maintain agents' financial transaction records, including debit/credit entries, balance tracking, and transaction history, supporting accurate reconciliation and financial reporting.

Technology Stack: Golang, PostgreSQL, MongoDB, Kafka, Redis, REST API, Google Cloud Platform

Back End Engineer | PT Nusantara Sukses Teknologi (Nusatek.id) **Dec 2021 – Feb 2022**

Surabaya, Indonesia • Remote Freelance

- Contributed to the end-to-end backend refactoring of MOaja, a Smart Living and Property Technology platform, using Golang and PostgreSQL.
- Restructured the codebase into a clean, layered architecture (Usecase, Repository, Controller), enforcing clear separation of concerns across business logic, data access, and HTTP handling.
- Developed reusable base utility functions and standardized database interactions, improving code maintainability and team consistency.

Technology Stack: Golang, PostgreSQL, Redis, REST API

Back End Engineer | TwisCode Pte. Ltd. **Jan 2020 – Aug 2021**

Surabaya, Indonesia • On-site

Sidely CRM Platform

- Built the CRM and Sales Force Automation (SFA) backend from the ground up using Node.js, covering customers, contacts, sales activities, and business data.
- Architected and developed a dynamic Form Builder engine from scratch, with configurable form structures, dynamic field definitions, and form submission management.
- Developed reusable backend components and business logic to support flexible product configurations and customizable business workflows.

Technology Stack: Node.js, MySQL, REST API

DjuBli Automotive Marketplace

- Built backend services and APIs in Node.js and MySQL for an automotive marketplace covering new and used vehicle listings and buyer-seller interactions.
- Contributed to the online vehicle auction platform and supported the transaction workflows behind it.
- Maintained marketplace APIs and backend data management for core business processes.

Technology Stack: Node.js, MySQL, REST API

Full Stack Engineer | Rigel Digital Solusi Indonesia **Jun 2017 – Jan 2020**

Surabaya, Indonesia • On-site

- Built a customized ERP system for a property client to support operational efficiency and resource management.
- Designed and maintained a Point of Sale (POS) system for a minimarket client, focusing on stability and performance.
- Delivered responsive company websites and a marketplace with product listings, transaction workflows, and customer engagement features.

Technology Stack: PHP, Laravel, Codeigniter, OracleDB, Sql Server, Vue.js, Jquery, REST API

EDUCATION

Universitas Terbuka – Bachelor's Degree in Management Information Systems **Expected 2029**
