LUQMANUL HAKIM

SOFTWARE ENGINEER | BACKEND & PAYMENT SYSTEMS

+6283830859532 | luqmanulhakim.dev@gmail.com | LinkedIn ↗ | Portfolio ↗

Surabaya, East Java, Indonesia, 60176

PROFESSIONAL SUMMARY

Software Engineer with 9+ years of experience developing web applications, backend services, and transaction-focused systems. Experienced in payment and payout integrations, transaction processing, system observability, retry mechanisms, and API modernization. Hands-on with Go, Node.js, PHP/Laravel, PostgreSQL, MongoDB, Redis, Kafka, RabbitMQ, and Google Cloud Platform.

TECHNICAL SKILLS

Languages & Frameworks: Go, Node.js, PHP, Laravel, JavaScript, Vue.js

Databases & Messaging: PostgreSQL, MySQL, MongoDB, Redis, Apache Kafka, RabbitMQ, Firebase, ElasticSearch, Google Pub/Sub

Cloud & Observability: Google Cloud Platform (GCP), Grafana, Linux, Docker, Kubernetes, Prometheus, VictoriaMetrics, NewRelic, SonarQube

Architecture & APIs: REST APIs, Microservices, Payment/Payout Integration, Retry & DLQ Processing, Git, SDLC, Event-Driven

PROFESSIONAL EXPERIENCE

Software Engineer | PT Amartha Mikro Fintek — **Sep 2021 – Oct 2026**

Surabaya, Indonesia • On-site

Payment Platform Team — **Sep 2025 – Oct 2026**

- Refactored the Transaction V2 architecture by integrating payment and payout adapters into a unified transaction flow, enabling standardized disbursement and bank transfer processing across multiple payment channels.
- Designed and implemented system observability through metrics, monitoring, and alerting across consumer services and background jobs, improving visibility into system health, transaction processing, and potential failures.
- Integrated BCA Virtual Account Host-to-Host APIs to enable Virtual Account top-up transactions, including transaction processing, status handling, and integration with existing payment flows.
- Improved transaction reliability and fault tolerance by enhancing retry mechanisms and Dead Letter Queue (DLQ) processing to handle transient failures and ensure failed transactions could be properly recovered and reprocessed.
- Enhanced the Global Transaction History and Payment Widget, while migrating legacy transaction flows to a single API, simplifying transaction integration and improving consistency across products and services.

Technology Stack: Golang, PostgreSQL, ElasticSearch, Kafka, Redis, Docker, REST API

New Retail / Agent Network Team — **Sep 2021 – Sep 2025**

- Contributed to the development of New Retail / Agent Network solutions within the Payments business unit, focusing on scalable payment and financial transaction services for agent networks.
- Developed and enhanced agent onboarding and PPOB services covering loan repayment, remittance, withdrawal, and pocket top-up, supporting end-to-end agent transaction workflows.
- Designed and implemented payment service integrations with internal systems and third-party PPOB providers, including Alterra, GoTo, and Sakalaguna, enabling reliable transaction processing across multiple payment channels.
- Designed and developed a Cashback & Incentive Management feature to manage agent reward programs, including incentive configuration, cashback calculation, eligibility rules, and transaction-based incentive tracking.
- Designed and implemented a Digital Ledger to maintain agents' financial transaction records, including debit/credit entries, balance tracking, and transaction history, supporting accurate reconciliation and financial reporting.

Technology Stack: Golang, PostgreSQL, MongoDB, Kafka, Redis, REST API, Google Cloud Platform

Back End Engineer | PT Nusantara Sukses Teknologi (Nusatek.id) — **Dec 2021 – Feb 2022**

Surabaya, Indonesia • Remote Freelance

- Contributed to the end-to-end backend refactoring of MOaja, a Smart Living and Property Technology platform, using Golang and PostgreSQL.
- Architected and restructured the application codebase from the ground up into a clean, layered architecture consisting of Usecase, Repository, and Controller layers.
- Enforced clear separation of concerns across business logic, persistent data access, and HTTP request handling to enhance modularity.
- Developed reusable base utility functions and standardized database interactions using PostgreSQL, substantially improving code maintainability and team consistency.

Technology Stack: Golang, PostgreSQL, Redis, REST API

Back End Engineer | TwisCode Pte. Ltd. **Jan 2020 – Aug 2021**
Surabaya, Indonesia • On-site

Backend Engineer – Sidely CRM Platform
Contributed to building Sidely, a CRM and Sales Force Automation (SFA) platform designed to help businesses manage customer relationships, sales operations, and field activities.

- Built the CRM backend from the ground up using Node.js.
- Designed and developed core CRM functionalities for managing customers, contacts, sales activities, and business data.
- Architected and developed a dynamic Form Builder engine from scratch.
- Implemented configurable form structures, dynamic field definitions, and form submission management.
- Developed reusable backend components and business logic to support flexible product configurations.
- Designed backend capabilities to support customizable business workflows and data collection.

Technology Stack: Node.js, MySQL, REST API

Backend Engineer – DjuBli Automotive Marketplace
Contributed to the development of DjuBli, an automotive marketplace platform for buying and selling new and used vehicles, including an online vehicle auction system.

- Developed backend services using Node.js and MySQL.
- Contributed to building the automotive marketplace platform.
- Developed backend functionalities supporting vehicle listings, buyer and seller interactions, and marketplace operations.
- Contributed to the development of the online vehicle auction platform.
- Supported backend data management and transaction workflows.
- Developed and maintained APIs for marketplace business processes.

Technology Stack: Node.js, MySQL, REST API

Full Stack Engineer | Rigel Digital Solusi Indonesia **Jun 2017 – Jan 2020**
Surabaya, Indonesia • On-site

- Built a customized ERP system for a property client to support operational efficiency and resource management.
- Designed and maintained a Point of Sale (POS) system for a minimarket client, focusing on stability and performance.
- Delivered responsive company websites and a marketplace with product listings, transaction workflows, and customer engagement features.

Technology Stack: PHP, Laravel, Codeigniter, OracleDB, Sql Server, Vue.js, Jquery, REST API

EDUCATION

Universitas Terbuka
Bachelor's Degree in Management Information Systems **(In progress)**
